

- 1996). The authors also found that the frequency of use of the Internet was positively related to the frequency of use of the telephone. This finding is consistent with the idea that the Internet is a new communication technology that is being used in much the same way as the telephone. The authors also found that the frequency of use of the Internet was positively related to the frequency of use of the computer. This finding is consistent with the idea that the Internet is a new communication technology that is being used in much the same way as the computer.
